

March 6th, 2015

To whom it may concern,

I would like to inform you of the fantastic job that CCI Flooring did for GPE in February of 2014, and again in December of 2014. Bob Bauer (President of CCI Flooring) and his crew installed beautiful epoxy coat flooring in three of our laboratories, a large storage room, and connecting hallways. The flooring is proving to be very mechanically durable and corrosion resistant as it gets use.

One significant challenge faced by GPE during recent renovations was laboratory downtime. Bob's crew worked very diligently to finish up on schedule. They also did very thorough job during their initial site visit and were able to bid the job appropriately. We incurred no cost overruns for either the Feb. or Dec. jobs.

Bob and his crew did an excellent job explaining the various tasks they perform as part of the flooring installation. This was critical so that we could adequately prepare our laboratories in order to protect delicate instruments and expensive equipment. GPE suffered absolutely no damage or contamination as a result of the work done by CCI Flooring.

Laboratory safety is a strong part of GPE culture. I'm still impressed every time I walk on the CCI flooring in terms of the non-skid top coat. They were able to strike the perfect balance between non-slip and easy to wipe clean. In addition, the floors are of such high quality that I don't ever envision a case where chemical spills are able to seep through cracks or get underneath the flooring.

Having flooring installed by CCI is well worth the investment. I highly recommend them to any organization planning on running a lab and/or doing business for more than a couple of years. Please feel free to contact me with any further questions.

Sincerely,

Michael G. Lussier Jr, Ph.D.
